

BOLUS INSTRUCTIONS

TO RECEIVE A FREE BALLING GUN CALL 1-800-466-8235

ANTIBODY DRIVEN IMMEDIATE IMMUNITY AGAINST BACTERIAL & VIRAL SCOURS

Step 1:

Insert Bolus into the First Defense® Balling Gun

- Place long skinny end into base of gun

Step 2:

Secure calf

- Straddle the calf between your legs
- Hold calf against your thigh with head up

Step 3:

Insert Balling Gun

- Open the calf's mouth
- Insert balling gun
- Angle balling gun to the left until you feel it on your thigh
 - Your fingers on the balling gun handle should graze calf's teeth

Bolus needs to be in the feeding tube before ejecting from the balling gun. If the Bolus is ejected too soon (in the mouth/throat), it's like giving a child a marble - you risk choking.

Step 4:

Release Bolus

- Release bolus by depressing balling gun plunger
- Keep calf's head up until he/she swallows
- Rubbing neck will induce swallowing reflex

Best sign a calf has swallowed the bolus: he/she will lick lips and nose

ATTENTION! DO NOT GIVE BOLUS IF:
Calf is laying down, bucking or struggling.
Calf can gasp and suck in the bolus before it is properly placed.

GEL TUBE INSTRUCTIONS

Administer after birth for immediate immunity with guaranteed antibody levels in every dose

ANTIBODY DRIVEN IMMEDIATE IMMUNITY AGAINST BACTERIAL & VIRAL SCOURS

Step 1:

Take gel tube out of refrigerator

- Gel Tube can go straight from the refrigerator into the calf

Step 3:

Remove cap, place tip at the back of the throat, toward the cheek pocket

- Initiate the plunger and over a few seconds, slowly squeeze entire tube contents into the calf's mouth, ensuring the calf swallows all of the gel

Step 2:

Secure calf

- Hold calf against your thigh with head up

Step 4:

Massage calf's throat while holding its head up to get the calf to swallow

Protocol Tracker: Blue dye is non-digestible serving as a tracker through the system to ensure calf received treatment.

First fecal stool after administration will be blue-green in color.
