

Focus Cat Vax 3[®]

Ideal annual booster for cats of all ages

3-WAY PROTECTION

Focus Cat Vax 3[®] is designed for administration by subcutaneous injection. This vaccine contains Rhinotracheitis, Calicivirus, and Panleukopenia virus antigens. Each of the viruses are widespread and are common disease causing agents in cats.

- Ideal annual booster
- Do-it-yourself at home
- Easy to use vaccines - complete with syringe
- How-to-vaccinate videos available online

Packaging

Single dose with syringe - 25 doses/display - 4 displays/case
UPC# 7-45801-74910-8

GUARANTEED QUALITY

Pure. Safe. Effective. Easy to use.

Spectra & Focus vaccines are made to exacting quality standards and temperature controlled from plant to you.

Peak protection against major infectious diseases.

USDA approved for purity, potency, safety and efficacy.

Indications

This product has been shown to be effective for the vaccination of healthy cats 8 weeks of age or older against feline rhinotracheitis, calici and panleukopenia viruses. The duration of immunity for this product has not been established.

For more information regarding efficacy and safety data go to productdata.aphis.usda.gov.

Directions and Dosage

Open syringe by twisting or tapping the cap against a hard surface to break the heat weld. Aseptically rehydrate the vaccine cake with 1mL of sterile diluent supplied. SHAKE WELL. Withdraw entire contents into the syringe. Administer one 1 mL dose subcutaneously using aseptic technique: lift the loose skin behind the neck or behind the right hind leg (see illustration) and insert needle. Inject entire contents of syringe. Do not inject directly into blood vessel. IMPORTANT NOTE: Before injecting vaccine, pull back slightly on syringe plunger. If blood enters the syringe freely, choose another injection site.

Healthy cats should receive two doses, 3 to 4 weeks apart, except that if the animal is less than 16 weeks of age, the final dose should be given no earlier than 16 weeks of age. The presence of maternal antibody is known to interfere with the development of active immunity in cats and additional boosters will be required in most young animals. Historically, annual revaccination with a single dose has been recommended for this product. The need for this booster has not been established. For advice on revaccination frequency and annual booster vaccinations, consultation with a veterinarian is recommended.

Precautions

DO NOT VACCINATE PREGNANT QUEENS. Store in the dark at 35 – 46°F (2 – 8°C). DO NOT FREEZE. Do not mix with other products, except as specified on this label. In case of anaphylactoid reaction, administer epinephrine. In case of human exposure, contact a physician. Inactivate unused contents before disposal. Neomycin and polymyxin B added as preservatives.

Recommended Vaccination Schedule

VACCINE	8 weeks	12 weeks	16 weeks	Annual Booster
