

Operating Instructions

1. Use ONLY the provided power supply, plug in, and charge your unit until full battery indicator lights are showing 3 GREEN bars. A RED light indicates the power is on. 2. Press the Power Button until it “clicks” to turn the unit on. The red light signifies power is on. Green indicates the battery is charged. 3. Press the “trigger button” (opposite side) and make contact. 4. Power OFF when not in use. Lights will be turned off.

Charging Instructions

1. Connect your Hornet to a power outlet using the charging cord (provided) to a USB power adapter (not provided)
2. You can charge either AC Power 120V or DC 12v using provided charger.
3. You will see a red light appear on the charger indicating the unit is charging, when it turns green the unit is fully charged.
4. Remove from charger. **Warning**

- **NEGATIVE POLARITY CHARGER USE OF NON-OEM CHARGER WILL NOT CHARGE AND MAY CAUSE MALFUNCTION AND VOID WARRANTY.**
- This product is used for animal husbandry.
- After use, turn OFF the power switch.

Power On/Off-

Battery Indicator

- Red indicates power is on and will need charged if you don't see green lights and only see a red light. (battery meter does not “trickle” down) It will be red for power and green for charged.
- Lithium-ion batteries work best when you unplug them from the charger once fully charged. This extends the life of your battery.

Rechargeable Battery Port

**USE ONLY USB CHARGING CORD PROVIDED-
NEGATIVE POLARITY CHARGER ONLY**

EZ Warranty

The product is warrantied against manufacture defects 12 months from the manufactured date. Proof of purchase is required. Warranty card must be completed and returned to HerculesAG or filled out online. See back for details.

Troubleshooting

Symptom	Possible Cause	Possible Fix
Battery Indicator has no lights, unit has no power.	Unit is not charged or turned on	Press power button down until it clicks . Battery indicator lights should turn on. If only one red light turns on and no green lights unit needs charged.
No Shock	Metal connectors bent or not making contact. Possible bad connection.	If using a NON - HerculesAG shaft be sure that the copper connectors on the shaft are opened up and not pushed down. If you are using a used shaft from another brand you will need to open up the copper connectors on the bottom. If using a HerculesAG shaft, inspect connection prongs at handle and collar nut. Turn power on, look for battery indicator of 3 green lights, 1 red light, touch both prong tip points to a metal surface or hold a screwdriver to where the metal end is touching both tips. Press the trigger button. If no arc, then shaft possibly needs to be replaced. We only guarantee functionality of our HerculesAG shafts.
